

Description

ESD Bubble Bag is made of PE by film or say roll. Its function is to prevent any impact from products thru bubble with air inside. When bag shaking, it can protect products from shake, meanwhile it has heat insulation for various field industries. The bubble film have 2 types, single side and double side. Single type to protect lighter products. Double type is suitable for heavier package.

P/N LN-7017

Raw Material

- Material: PE with esd particles
- Type: Single side and Double side type
- Printing: it can have any color printing
- Compound: Both single and double side bag can compound with other materials, such as conductive grid film, shielding film, PE black film etc.
- Bubble Diameter: 10mm
- Bubble Height: 5mm

Surface Resistance

- 10e8-10e11 ohms

Application

Hardware, electronics, plastic, ceramic etc
