

Description

ESD flooring for industrial and commercial use. Conductive, Dissipative and Anti-Static electro-static discharge floor tiles manufactured in the UK.

- BS EN 61340-5-1 and IEC 61340 compliant
- Made in the UK
- Life time guarantee of ESD performance
- Easy to install
- Environmentally sustainable

Ecotile ESD Flooring is available in a heavy duty 7mm thick tile that can be used with fork truck and pallet truck traffic.

Ecotile ESD floor tiles are a static dissipative or conductive flooring system designed for use in areas where components or individuals need to be protected from the risk of electrostatic damage. This includes electronic sub-assembly areas or facilities where combustible/explosive materials are handled, typically in an industrial or manufacturing environment.

Ecotile ESD is guaranteed to meet BS EN 61340-5-1 and to be IEC 61340 compliant. The surface resistance of the tiles falls between 3.0×10^4 ohm/m² and 3×10^6 ohm. The contact resistance falls between 3.6×10^5 ohm and 9.5×10^5 ohm.

The conductive properties of Ecotile ESD floors will last for the lifetime of the tile and if grounded in accordance with our instructions and maintained properly, the tiles will create a safe conductive floor surface that can be used as your primary ground.
