

Description

Cleanroom paper is specially designed for writing, printing and photocopying in the cleanroom environments. Through polymerization process. Fiber lint and particulates are tightly bound into the sheet. And it can decrease buildup of electrostatic. Which will eventually minimize scrap rate of copier. We can provide a variety of colors and size. It can be used for notebook and recording paper.

Key Performance

- High cleanliness, Low ion, particle and extratavles.
- Suitable for using in class 10 to class 1000 cleanroom.
- High tensile strength with excellent heat resistance.
- Enhancing the efficiency of copier and printing.
- Surface Resistance: $10E6-10E10$, size: A4
